Detailed Journal Evaluation Report in the ICI Journals Master List database 2024

„Seminare. Learned Investigations”

ISSN: 2450-1328, 1232-8766

ICV 2024: 100.00

The result of the assessment in the ICI Journals Master List database – the Index Copernicus Value (ICV) – is a measure of the parametric power of a scientific journal. It indicates to what extent the journal meets international standards in the field of key functional areas of this medium of science.

The ICV consists of two main components:

quality of the journal

measured based on fulfilling the criteria of the ICI Publishing Stars model, which is currently focused around two aspects of journal working, namely its digitalisation and internalisation.

journal's impact

determined by the analysis of citation trends of journals indexed in Web of Science and Scopus databases, which reflects intensity with which a journal has been recognised in the scientific world.

Punctuation

The maximum number of points that a journal can obtain from the entire "quality of the journal" criterion is 100. A journal can also receive negative points (e.g. for delays in publishing or publishing combined issues) – maximum 4 points. Obtaining by a journal an ICV greater than 100 points means that it is indexed in the Web of Science and / or Scopus database and had bibliometric indicators in the two years preceding the year of assessment.

In the evaluation of the ICI Journals Master List 2024 the journal received

100.00 ICV points

(quality of the journal: 120.98 points + journal's impact: 0.00 points).

- Publishing quality and standards**

max score: 21.50

obtained: 21.50

100% of meeting the parameters

- Stability**

max score: 4.00

obtained: 3.00

75% of meeting the parameters

- Digitalization**

max score: 68.50

obtained: 67.23

98% of meeting the parameters

- Internationalization**

max score: 33.00

obtained: 29.25

88% of meeting the parameters

Assessment details

Publishing quality and standards	Points 21.50 / 21.50
Keywords in original language	100 %
Keywords in English	100 %
Author's affiliation	100 %
Article's submission / acceptance date	100 %
Publishing in the article metadata the author's statement about the sources of funding for the research presented in the scientific article or the creation of the scientific article	100 %
Instruction regarding the structure of the article	100 %
Instruction regarding the format of references	100 %
Clear and esthetic layout of the articles and the journal	100 %
Published review procedure	100 %
Review model	100 %
Contribution of reviewers with external affiliation	100 %
Statements from the authors about the originality of the article	100 %
Statements from the authors about their contribution to the article	100 %
Requiring the author to submit a statement about the sources of funding for the research presented in the scientific article or the creation of a scientific article	100 %
Contribution of authors with external affiliation	100 %
Contribution of Scientific Council members with external affiliation	100 %
Stability	Points 3.00 / 4.00

Positive criteria	Points 3.00 / 4.00
Journal's publication frequency	50 %
Years of publishing stability of the journal	100 %
Negative criteria	Points 0.00 / -4.00
Publication delay of more than 6 months in 2023 - 2024 period	0 %
Publication of combined issue in 2023 - 2024 period	0 %

Digitalization	Points 67.23 / 68.50
Electronic publishing-editorial system	100 %
Collecting statistics of articles' display and downloads	100 %
Used bibliographic styles	100 %
Bibliographic data management tools	100 %
Full texts of scientific articles available online	100 %
DOI numbers for scientific articles	100 %
Using the anti-plagiarism system to verify the authenticity of manuscripts	100 %
Application of the "ahead of print" / "early birds" rule for all scientific articles	100 %
Formats of scientific articles available online	50 %
Indexing in scientific databases (check the potential)	100 %
Regular indexation in the ICI Journals Master List	100 %
Availability in the journal's Passport of metadata of articles from the last 4 years (add publications)	100 %

Internationalization	Points 29.25 / 33.00
-----------------------------	-----------------------------

Language versions of the journal's website	100 %
Share of full texts published in congress languages	100 %
Title and abstract of all scientific articles in English	100 %
Contribution of authors with foreign affiliation	50 %
Contribution of reviewers with foreign affiliation	75 %
Contribution of Scientific Council members with foreign affiliation	100 %
Journal's impact	Points 0.00
Journal's citation	0.00
Journal's citation dynamics	0.00

Perspective of the development of the journal

Journal „Seminare. Learned Investigations” (ISSN: 2450-1328, 1232-8766) has successfully passed the indexation process in the ICI Journals Master List database for 2024. The evaluation of the journal was based on the standards described in the indexation procedure, evaluation methodology and *Predatory Journals* anti-practice policy. Indexing in the ICI database proves that the journal meets the elementary requirements that are currently imposed on scientific journals.

For Editors that plan to strengthen the reach of their journal, we offer an examination of its indexation potential in other major international databases, i.e.:

- Emerging Sources Citation Index (Web of Science),
- Scopus,
- DOAJ,
- ERIH Plus.

As part of the service, a precise development strategy is prepared for each journal in the form of a list of tasks necessary to perform. The analysis provides for the verification of the journal's compliance with the indexation criteria appearing in up to four of the above-mentioned databases.

Total number of parametric criteria found
in the above databases: 61

Thanks to the information obtained, it will be possible to precisely assess to what extent a particular journal complies with the standards set by other leading repositories. Identification of existing imperfections will make it possible to start the process of directional changes in the functioning of the journal and the quality of editorial services provided. Knowledge of additional parameters will enable better preparation for the application process for indexation, which is currently one of the most important challenges faced by the editorial offices of scientific journals.
